CAREER OBJECTIVE

My goal is to contribute to impactful projects, sharpen my problem-solving abilities, and grow into a versatile developer.

EDUCATION

B.Tech, Computer Science & Engineering

Arya College Of Engineering & IT

2025 - 2029

TRAININGS / CERTIFICATIONS

Full Stack Web Development

Apr 2019 - Nov 2020

self, Virtual

User-friendly websites are my specialty, and I built this proficiency through self-learning and consistent practice. I mastered full-stack development by leveraging resources such as YouTube tutorials and official documentation. This approach equipped me with the necessary skills to create websites from scratch using React.js, JavaScript, Tailwind CSS, and Next.js. My hands-on experience has allowed me to create efficient and dynamic websites with ease.

PORTFOLIO

PROJECTS

[MediNutri — AI-Powered Health & Nutrition Tracking App ↗](#)

Mar 2026 - May 2026

MediNutri — AI-Powered Health & Nutrition Tracking App build a full-stack health platform with role-based auth (clinic & patient dashboards), e-commerce, AI diagnostics, and a streaming chatbot — fully deployed on Vercel Implemented role-based authentication with separate dashboards for clinics and patients; clinics manage inventory and orders while patients browse, track health, and purchase medicines Built end-to-end Razorpay payment integration covering cart management, checkout flow, order confirmation, and transaction verification with status-aware UI states

[Land Record Digitization System ↗](#)

Jan 2026 - Feb 2026

Land Record Digitization System — GeoJSON-Based Parcel Reconciliation Platform

- Built a spatial land record system linking GeoJSON parcel geometries to PostgreSQL ownership records, enabling inconsistency detection between map data and legal ownership
- Developed inconsistency detection logic with configurable area mismatch thresholds, surfacing discrepancies across hundreds of parcels
- Built an interactive Leaflet map with parcel click/search, audit trail, and inline editing; normalized plot_id types to fix cross-source mismatches
- Implemented a create-or-update parcel API and fixed a bulk upload deleteMany bug that was wiping existing records on image-only uploads

CampusFund — Blockchain-Powered Campus Crowdfunding Platform

- Architected a per-campaign smart contract model on Algorand TestNet, deploying isolated contracts at campaign creation with methods for donation, invoice verification, fund claiming, and refund
- Implemented a donor-pull refund model to stay within Algorand's 256 inner transaction limit, ensuring platform scalability
- Integrated Groq Vision OCR + GSTIN Check API for GST invoice verification, gating fund claims behind verified invoices to enforce accountability
- Built a UPI→ALGO donation bridge using Razorpay and throwaway Algorand keypairs, enabling non-crypto users to fund campaigns seamlessly
- Debugged AVM opcode-level assertion failures during TestNet deployment; implemented Lucia Auth + Arctic for secure authentication

SKILLS

- | | | |
|---------------|--------------|----------------|
| • JavaScript | • Next.js | • Tailwind CSS |
| • Node.js | • MongoDB | • React |
| • PostgreSQL | • Prisma ORM | • React Native |
| • TypeScript | • HTML | • CSS |
| • GitHub | • Git | • Angular 2.0 |
| • Angular 7.0 | • AngularJS | • MySQL |

ADDITIONAL DETAILS

- Runner-Up — Hacknovate 7.0 (Algorand Blockchain Track) Secured 2nd place among competing teams at Hacknovate 7.0 for CampusFund
- 3rd Place — Geospatial Hackathon, Arya College of Engineering & IT Awarded 3rd prize for Land Record Digitization System
